

CMPRO Change Notice

Pending Status Added to Project and Project-Task (Project Management Enhancements)

Overview

A new **Pending** value can be assigned to projects or project-tasks under development but not yet ready for general use. The **Pending** status can also be used for previously **Active** projects and tasks that, for whatever reason, must be returned to a “pending” state.

Details

A radio button labeled **Pending** has been added to the **Active** field on both the *Project Management Detail* screen and *Project Management Task Detail* screen. Upon creation of a project, the default value for the **Active** field is **Pending**, placing the project and its project-tasks in an interim state. Projects and project-tasks in this state will not be available for selection in any List of Values (LOV) on related screens such as:

- *Project Management Search*
- *Project Management Task Search*
- *Action Item Create*
- *Action Item Search*
- *Action Item Detail*

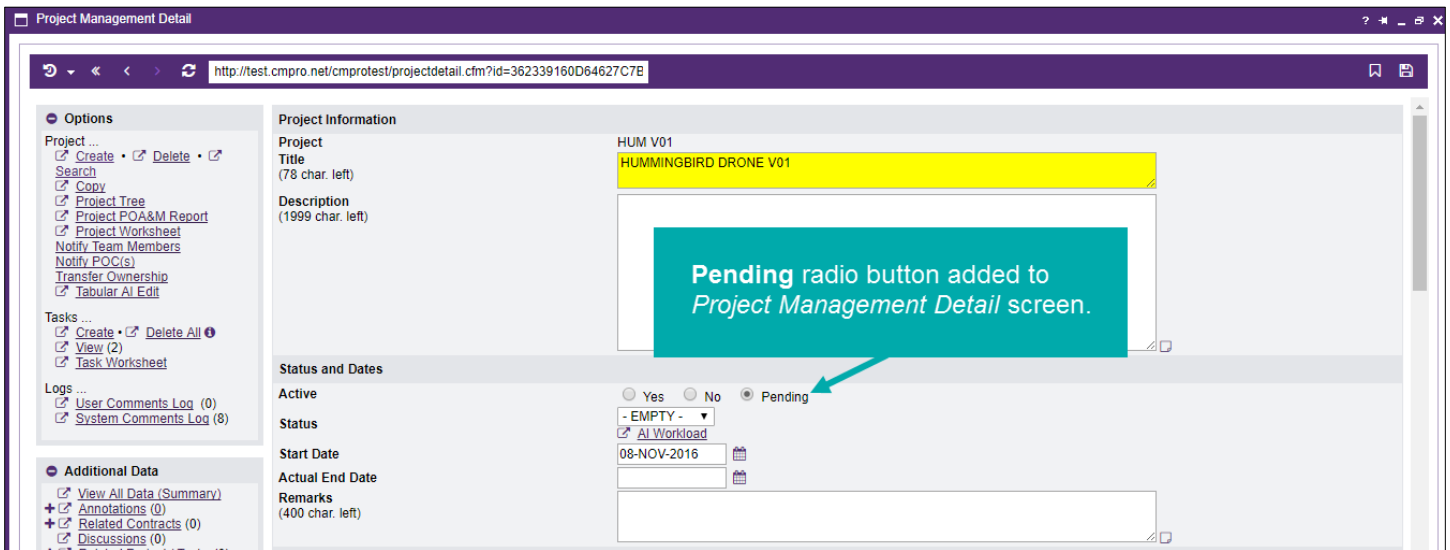

When the project or project-task is ready for use, selecting the **YES** radio button for the **Active** field will initiate such action.

The screen captures further down display the changes discussed herein regarding the Project Management screens.

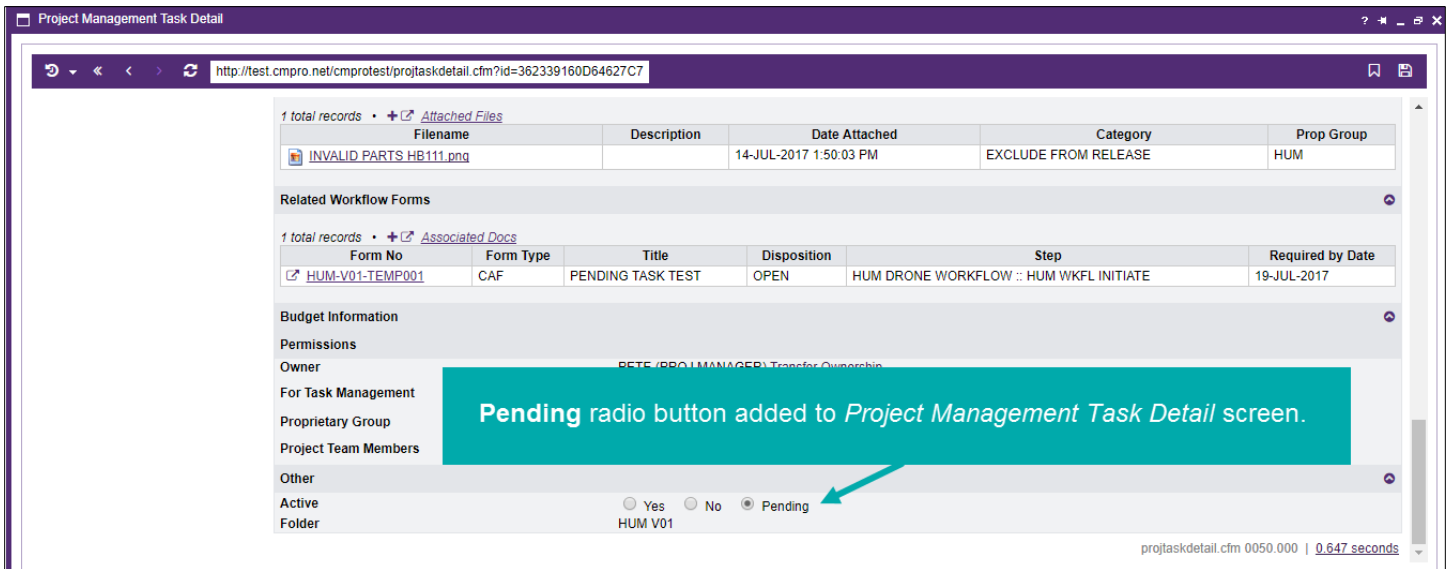

Availability

The changes described herein will be available with the release of C-BN-0116.
